If the repair station has an assigned principal maintenance inspector (PMI) and a principal avionics inspector (PAI), coordinate this inspection between both inspectors. 6-1780 REFERENCES, FORMS, AND JOB AIDS. A. References (current editions): · Title 14 of the Code of Federal Regulations (14 CFR) parts 43, 91, and 145.

Effective safety management has always been a key objective for the broader airworthiness sector. This book is focused on safety themes with implications on airworthiness management. It offers a diverse set of analyses on aircraft maintenance accidents, empirical and systematic investigations on important continuing airworthiness matters and research studies on methodologies for the risk and safety assessment in continuing and initial airworthiness. Overall, this collection of research and review papers is a valuable addition to the published literature, useful for the community of aviation professionals and researchers.

The Routledge Handbook of Public Aviation Law is the first book to incorporate a comprehensive analysis of Public Aviation Law – principally international, but also domestic law in a comparative context – in a single volume. International Law is

pervasive in Aviation Law, and is incorporated into a number of major multilateral treaties (e.g., the Chicago Convention of 1944, for Public International Air Law). This is supplemented by various Annexes (promulgated by the International Civil Aviation Organization) and Conventions and Protocols (promulgated by States in diplomatic conferences). States then implement these international obligations in domestic laws that create aviation regulatory administrations that, in turn, promulgate regulations. Bringing together leading scholars in the field, this prestigious reference work provides a comprehensive and comparative overview of Public Aviation Law. It surveys the state of the discipline including contemporary and emerging areas of law, regulation, and public policy in air transportation. Each chapter begins with an overview of the international law applicable to the subject matter, followed, where appropriate, by a comparative examination of domestic statutes, regulations, and jurisprudence. The objective of the book is to identify and summarize existing areas within the context of international research, and to identify and highlight emerging areas. Both practical and theoretical in scope, the Routledge Handbook of Public Aviation Law will be of great relevance to scholars, researchers, lawyers, and policy makers with an interest in aviation law.

The Federal Aviation Administration (FAA) has published the Private Pilot - Airplane Airman Certification Standards (ACS) document to communicate the aeronautical knowledge, risk management, and flight proficiency standards for the private pilot certification in the airplane category, single-engine land and sea; and multiengine land and sea classes. This ACS incorporates and supersedes the previous Private Pilot Practical Test Standards for Airplane, FAA-S-8081-14. The FAA views the ACS as the foundation of its transition to a more integrated and systematic approach to airman certification. The ACS is part of the safety management system (SMS) framework that the FAA uses to mitigate risks associated with airman certification training and testing. Specifically, the ACS, associated guidance, and test question components of the airman certification system are constructed around the four functional components of an SMS: Safety Policy that defines and describes aeronautical knowledge, flight proficiency, and risk management as integrated components of the airman certification system; Safety Risk Management processes through which internal and external stakeholders identify and evaluate regulatory changes, safety recommendations and other factors that require modification of airman testing and training materials; Safety Assurance processes to ensure the prompt and appropriate incorporation of changes arising from new regulations and safety recommendations; and Safety Promotion in the form of ongoing engagement with both external stakeholders (e.g., the aviation training industry) and FAA policy divisions. The FAA has developed this ACS and its associated guidance in collaboration with a diverse group of aviation training experts. The goal is to drive a systematic approach to all components of the airman certification system, including knowledge test question development and conduct of the

Online Library Airworthiness Inspectors Manual Audit Check List

practical test. The FAA acknowledges and appreciates the many hours that these aviation experts have contributed toward this goal. This level of collaboration, a hallmark of a robust safety culture, strengthens and enhances aviation safety at every level of the airman certification system.
