Volume 20 of Research on Professional Responsibility and Ethics in Accounting brings together a range of articles exploring the professional responsibilities of accountants, codes of conduct which affect them, and securities regulations.

In a global economy, multinational companies often operate in jurisdictions where governments are either unable or unwilling to uphold even the basic human rights of their citizens. The expectation that companies respect human rights in their own operations and in their business relationships is now a business reality that corporations need to respond to. Business and Human Rights: From Principles to Practice is the first comprehensive and interdisciplinary textbook that addresses these issues. It examines the regulatory framework that grounds the business and human rights debate and highlights the business and legal challenges faced by companies and stakeholders in improving respect for human rights, exploring such topics as: the regulatory framework that grounds the business and human rights debate challenges faced by companies and stakeholders in improving human rights industry-specific human rights standards current mechanisms to hold corporations to account future challenges for business and human rights With supporting case studies throughout, this text provides an overview of current themes in the field and guidance on practical implementation, demonstrating that a thorough understanding of the human rights

challenges faced by business is now vital in any business context.

While there is a large and ever-expanding body of work on the fields of business ethics and corporate social responsibility (CSR), there is a noted absence of a single source on the methodology and research approaches to these fields. In this book, the first of its kind, leading scholars in the fields gather to analyse a range of philosophical and empirical approaches to research in business ethics and CSR. It covers such sections as historical approaches, normative and behavioural methodologies, quantitative, qualitative and experimental perspectives, grounded theory and case methodologies, and finally a section on the role of the researcher in research projects. This book is a valuable and essential read for all researchers in business ethics and CSR, not only for those starting out in the fields, but also for seasoned scholars and academics.

At last, the first systematic guide to the growing jungle of citation indices and other bibliometric indicators. Written with the aim of providing a complete and unbiased overview of all available statistical measures for scientific productivity, the core of this reference is an alphabetical dictionary of indices and other algorithms used to evaluate the importance and impact of researchers and their institutions. In 150 major articles, the authors describe all indices in strictly mathematical terms without passing judgement on their relative merit. From widely used measures, such as the journal impact factor or the h-index, to highly specialized indices, all indicators currently in use in the sciences and humanities are described, and their application explained. The introductory section and the appendix contain a wealth of valuable supporting information on data sources, tools and techniques for bibliometric and scientometric analysis - for individual researchers as well as their funders and publishers.

The blurring of boundaries between hitherto distinct scientific disciplines, technologies or markets is a common and powerful phenomenon. Subjects of this convergence often change consumer behaviours, favouring products and platforms with multiple functions. The Anticipation of Converging Industries provides a detailed focus on the triggers, drivers and consequences of convergence to create a more concise definition of convergence. This detailed analysis includes a specifically developed toolbox for 'convergence foresight', creating a forecasting method for convergence trends. With the focus on the chemical, biotechnological and pharmaceutical industries, several indicators of convergence in the areas of Nutraceuticals/Functional Foods, Cosmeceuticals and ICT are derived from samples including over 1 million patents and scientific publications. By supporting this methodical approach with real world data, The Anticipation of Converging Industries is perfect for industry practitioners looking for a competitive edge in the present and for the future. Similarly, academics will find a comprehensive theoretical concept for better understanding the underlying rationale of convergence at their disposal.

Globalization has produced opportunities and challenges that countries and firms respond to with a variety of policies and strategies. Approaches that scholars may find intuitively appealing may be considered inappropriate in some contexts. This book highlights the diversity of challenges, opportunities as well as the policy and strategy options that governments and businesses have considered useful in different operational contexts. It brings together research done by scholars at the International Business Centre, Department of Business and Management at Aalborg University, Denmark, and seeks to provide inspiration for further research into some key international business issues. Issues discussed include the following: A* The role of social capital in the internationalization process of firms. A* Downstream and upstream aspects of internationalization. A* Network organizational perspective on globalized innovation processes. A* Performance assessment in cross-border mergers and acquisitions. A* The human side of national and firm-level competitiveness. A* Country-of-origin effect on brand perception. A* Role of culture international joint venture management. A* Multiculturalism and strategizing in international firms.

Toward Assessing Business Ethics Education, edited by Diane L. Swanson and Dann G. Fisher of Kansas State University, is a sequel to their book Advancing Business Ethics Education in the Ethics in Practice IAP

book series. The focus on assessment in this second book is a timely response to the urgent search among business schools for ways to teach and assess ethics at a time when the public's faith in corporations and business schools has been undermined greatly by the failure of both to respond to widespread corruption and scandals in the business sector. Although no one expects business education alone to resolve these problems, the distinguished scholars represented in this book advocate that business schools should at least do their part by exposing their students to decision models that incorporate ethical dimensions on behalf of corporate stakeholders and society at large. As the book's title conveys, it is then important to assess key learning objectives to insure that business students graduate knowing ethics fundamentals and armed with the ability to recognize ethical dilemmas and possible solutions during the course of their careers. This book will speak to all who are interested in accountability for business ethics education, especially business school deans, university administrators, faculty members, students, and prospective employers. This audience will find that the enterprise of assessing business ethics education is advanced in three ways. First, the book functions as a venue for distinguished scholars to share the innovative ways that they are assessing ethics coverage in courses and degree programs. Second, these authors identify what needs to be assessed and the means for doing so. Third, the book serves not only as a guide to assessment, but also as a platform for expanding and improving ethics coverage in business schools. Moreover, an important take away for readers is the provision of a simple formula, first advocated by Diane L. Swanson and William C. Frederick (University of Pittsburgh) in 2005, for delivering ethics education that minimizes assessment errors. By following this formula, business schools can provide assurances that ethics will not be assessed as being sufficient when it is woefully inadequate or even missing in the curriculum and that it cannot be distorted, diluted, or trivialized by uninformed coverage and still pass inspection. Avoiding these assessment errors is critical in an educational environment in which weak accrediting standards for ethics go hand in hand with spotty, uninformed coverage that would not be tolerated for other business disciplines.

This volume includes works by authors from the global South and contributions about ethical issues in the global South, including the responses to famine in East Africa, India and Indonesia, and the applicability of international guidelines and ethical frameworks in South Africa.

The Routledge Companion to Family Business offers a definitive survey of a field that has seen rapid growth in research in recent years. Edited by leading scholars with contributions from the top minds in family business from around the world, this volume provides researchers and scholars with a comprehensive understanding of the state of the discipline. Over 25 chapters address a wide variety of subjects, providing readers with a thorough review of the key research themes in the modern family firm, such as corporate social responsibility and bank debt rationing. International examples cover a wide range of economies including China, Europe, and Latin America. The book will appeal to undergraduates, postgraduates and business instructors seeking a definitive view of the issues and solutions that affect and support family business.
