Beta The Interactive Night Sky Map simulates the sky above New York on a date of your choice. Use it to locate a planet, the Moon, or the Sun and track their movements across the sky. The map also shows the phases of the Moon, and all solar and lunar eclipses.

Night Sky Map & Planets Visible Tonight

Find a safe place to stargaze, preferably away from the glare of artificial lights. Turn to face south (the Sun sets approximately to your right) with north at the top of the page; the lower half of the chart will represent the southern region of sky you are facing. Turn around and face north, rotate the map so that south is at the top; the lower half of the chart will now represent the northern region of the sky you are facing.

Offers advice on observing the stars and constellations, discusses useful equipment, and includes information on the moon, comets, eclipses, and planets

Explore the star-studded cosmos with this fully updated, user-friendly skywatcher's guide, filled with charts, graphics, photographs, and expert tips for viewing -- and understanding -- the wonders of space. Stargazing's too much fun to leave to astronomers. In these inviting pages, "Night Sky Guy" Andrew Fazekas takes an expert but easygoing approach that will delight would-be astronomers of all levels. Essential information, organized logically, brings the solar system, stars, and planets to life in your own backyard. Start with the easiest constellations and then "star-hop" across the night sky to find others nearby. Learn about the dark side of the moon, how to pick Mars out of a planetary lineup, and which kinds of stars twinkle in your favorite constellations. Hands-on tips and techniques for observing with the naked eye, binoculars, or a telescope help make the most out of sightings and astronomical phenomena such as eclipses and meteor showers. Photographs and graphics present key facts in an easy-to-understand format, explaining heavenly phenomena such as black holes, solar flares, and supernovas. Revised to make skywatching even easier for the whole family, this indispensable guide shines light on the night sky--truly one of the greatest shows on Earth!

Offers an introduction to locating and observing celestial objects, including tips on finding deep-sky objects and advice on the best times for viewing.

Before GPS, before the compass, and even before cartography, humankind was navigating. Now this singular guide helps us rediscover what our ancestors long understood—that a windswept tree, the depth of a puddle, or a trill of birdsong can help us find our way, if we know what to look and listen for. Adventurer and navigation expert Tristan Gooley unlocks the directional clues hidden in the sun, moon, stars, clouds, weather patterns, lengthening shadows, changing tides, plant growth, and the habits of wildlife. Rich with navigational anecdotes collected across ages, continents, and cultures, The Natural Navigator will help keep you on course and open your eyes to the wonders, large and small, of the natural world.

Have you ever wondered if there are seasons on the moon or if space tourism will ever become commonplace? So has Dr. Maggie Aderin-Pocock. In fact, she earned her nickname "Lunatic" because of her deep fascination for all things lunar. In her lucidly written, comprehensive guide to the moon, Aderin-Pocock takes readers on a journey to our closest celestial neighbor, exploring folklore, facts, and future plans. She begins with the basics, unpacking everything from the moon's topography and composition to its formation and orbit around the Earth. She travels back in time to track humanity's relationship with the moon — beliefs held by ancient civilizations, the technology that allowed for the first moon landing, a brief history of moonazing, and how the moon has influenced culture throughout the years — and then to the future, analyzing the pros and cons of continued space travel and exploration. Throughout the book are sidebars, graphs, and charts to enhance the facts as well as black-and-white illustrations of the moon and stars. The Book of the Moon will be published for the 50th anniversary of the moon landing.

Turn your eyes to the skies for this starry-eyed spectacular! Take this practical page-turner on your out-of-this-world adventure to experience cosmic wonders, key constellations, and intergalactic information. Includes crystal-clear visuals, easy-to-read maps, and top tips, you'll have no problems navigating the starry night with this indispensable guide. Discover the most important constellations visible in the Northern Hemisphere, read the amazing stories behind each constellation, recognize the constellations of the zodiac, and experience the Milky Way as never before. Learn how to spot planets, galaxies, and nebulas in our Universe, as mind-blowing patterns in the sky are revealed in unprecedented detail. Star Finder! is the complete guide for aspiring astronomers and rising stars everywhere.

Provides a guide for beginning stargazers, including sky maps and constellation charts, identification tips, and space facts and jokes.

"While starship captains have been exploring the final frontiers of the Star Trek universe, this book takes you for the first time to the edge of our real galaxy and beyond. Stunningly illustrated with hundreds of full-color, futuristic star charts, illustrations and astronomical photos, explore the real-life deep space destinations as seen on television and film screens. A Over its 50-year history, Star Trek has treated generations of viewers to a dazzling assortment of unforgettable images of the cosmos. Multiple star systems, alien worlds, supernova explosions, emission nebulae, and, of course, voracious black holes, just to name a few. a Star Trek- The Official Guide to Our Universeintroduces you to the astronomy of Star Trek and takes you on a voyage of discovery, examining the true astronomical counterparts that can be found in the night sky. From Altair to Vega and from red giants to white dwarfs, readers can visit over 50 real celestial objects visible in the night sky, as known to the Starfleet Academy. a No warp driven starship or even a telescope required to go on these voyages, as most destinations are bright enough to be seen just with the naked eye. This guide is for anyone ready to launch their own mission into space-the final frontier. Your personal voyage to explore strange new worlds begins here."

The Definitive Resource for Viewing the Night Sky David Dickinson, Earth science teacher and backyard astronomer, and Fraser Cain, publisher of Universe Today, have teamed up to provide expert guidance on observing the night sky. The Universe Today Ultimate Guide to Viewing the Cosmos features the best tips and tricks for viewing our solar system and deep sky objects, as well as detailed charts, graphs and tables to find must-see events for years to come. This comprehensive guide is complete with stunning and exclusive photography from top night sky photographers, as well as advice on how to take your own incredible photos. Take your recreational viewing to the next level with activities like: Finding comets and asteroids Tracking variable stars Monitoring meteor showers Following solar activity Tracking satellites Timing lunar and asteroid occultations With star charts, practical background information, technological resources and telescope and astrophotography guides, this is the ultimate resource for any backyard space enthusiast.
